672. novaluron

Dear Member,

This is to inform you that Makhteshim Chemical Works is planning to organize a collaborative trial on a method for novaluron.

Principle: The content of novaluron is determined by reversed phase HPLC using a 250 x 4 mm LiChrospher 100 RP-18e, 5µm column, or equivalent, eluent acetonitrile: water, 65:35 (v/v) and UV detection at 260 nm. Quantification is done by external standardization.

Scope: It is intended to analyse three technical active ingredients and three EC formulations (6 samples). Novaluron analytical standard will be supplied.

Time schedule: The collaborative work is intended to be carried out during January / February 2004 (shipment November 2003).

Those who wish to participate should contact the organizer by 15 October 2003

Contact:

Dr. Uri Habusha
Quality Director,
Makhteshim Chemical Works LTD.
POB 60 Beer Sheva, 84100 ISRAEL
