CIPAC INFORMATION SHEET No 273

Your Ref:
Our Ref: LB
20 July 2007

673. boscalid

This is to inform you that DAPA/BASF is planning to organize a collaborative trial on a method for boscalid.

Principle. The boscalid content is determined by reversed-phase HPLC using a 250 mm x 4.6 mm (i.d.), J'sphere ODS-H80 column, or equivalent with the same selectivity, gradient elution, with mobile phase composed of acetonitrile/water/ammonium acetate and UV detection at 260 nm. Quantification is done by external standardization.

Scope. It is intended to analyze five samples consisting of two technical materials, one WG, SC and SE formulations. Samples and boscalid analytical standard will be supplied.

Time schedule. The collaborative trial is intended to be carried out during October 2007 – January 2008. Those who wish to participate should contact the organizer by 30th September 2007.

Contact:

Dr. Juergen Fries
BASF Aktiengesellschaft
