570. chlorfenapyr

This is to inform you that BASF/DAPA is planning to organize a collaborative trial on a method for chlorfenapyr.

Principle: The content of chlorfenapyr is determined by reversed phase high performance liquid chromatography on a HALO C18 column, 50 mm x 4.6 mm (i. d.), 2.7 µm, or equivalent, with mobile phase composed of acetonitrile/water and UV detection at 300 nm. Quantification is done by external standardization.

Scope: It is intended to analyze five samples consisting of three technical materials and two SC formulations. Samples and analytical standard will be supplied.

Time schedule: The collaborative trial is intended to be carried out during May 2011 – September 2011. Those who wish to participate should contact the organizer by 15th April 2011.
