#### 637. thiamethoxam

This is to inform you that Syngenta is planning to organize a collaborative trial on a method for thiamethoxam.

**Principle:** The content of thiamethoxam is determined by reversed phase high performance liquid chromatography on a Nucleodur C18 ec column (Macherey-Nagel), 75 mm x 4.6 mm (i.d.), 3µm, or equivalent, with mobile phase composed of acetonitrile/water (0.1% phosphoric acid)/methanol and UV detection at 254 nm. Quantification is done by external standardization.

**Scope:** It is intended to analyze five samples consisting of two technical materials, one FS, one SC and one WG formulation. Samples and thiamethoxam analytical standard will be supplied.

**Time schedule:** The collaborative trial is intended to be carried out during February 2012 – April 2012. Those who wish to participate should contact the organizer by 25<sup>th</sup> December 2011.
