### CIPAC INFORMATION SHEET No. 325

Your Ref:  
Our Ref: LB  
November 2019

#### 133 ametryn

Dear Colleague,

This is to inform you that Syngenta Crop Protection AG is planning to organise a full scale collaborative trial on a method for ametryn.

**Principle:** The content of ametryn in the formulations is determined by gas chromatography on a DB-WAX or equivalent fused silica column, 30 m length, 0.25 mm i.d., 0.25 µm film thickness, using helium as carrier gas and flame ionization detection. Quantitation is done by internal standard calibration.

**Scope:** It is intended to analyse five samples i.e. two technical material (TC), one water dispersible granule (WG) and two suspension concentrate (SC) samples. Samples, analytical standard and internal standard will be provided.

**Time schedule:** The collaborative trial is intended to be carried out between January 2020 – mid of April 2020. Those who wish to participate should contact the organiser by 2<sup>nd</sup> January 2020. The results should be reported by the mid of April 2020.

**Further information:** The trial is limited to 15 participating laboratories due to the availability of samples. The selection criterion is “first come, first served”.

**Contact:**

William Meyerhoffer  
Syngenta Crop Protection, LLC  
410 Swing Road  
Greensboro  
NC 27409, USA

Tel.: +1 336 632 2014
