20 November 2005

470. flufenoxuron

This is to inform you that DAPA/BASF is planning to organize a collaborative trial on a method for flufenoxuron.

Principle. The flufenoxuron content is determined by reversed-phase HPLC using a 250 mm x 4.6 mm (i.d), Phenomenex Phenyl-Hexyl column, 5 µm particle size, (or equivalent, with the same selectivity), with mobile phase composed of methanol and buffer, pH 2.5, 800/200 (v/v) and UV detection at 270 nm. Quantification is done by external standardization.

Scope. It is intended to analyze five samples consisting of two technical materials, one EC and two DC formulations. Samples and flufenoxuron analytical standard will be supplied.

Time schedule. The collaborative trial is intended to be carried out during January 2006 – March 2006. Those who wish to participate should contact the organizer by 15th December 2005.

Contact:

Dr. Jürgen Fries
BASF Aktiengesellschaft
APD/FA – Li 721
