#### 357. Pendimethalin

This is to inform you that I.Pi.Ci. is planning to organize a collaborative trial on a method for pendimethalin.

**Principle.** The pendimethalin content is determined by reversed-phase HPLC using a 250 x 3.0 mm i.d. Phenomenex® Synergi 4µm Max-RP80A column, or equivalent, with mobile phase composed of water and acetonitrile and UV detection at 235 nm. Quantification is done by external standardization.

**Scope.** It is intended to analyze five samples consisting of two lots of technical material and three lots of the EC formulation. Samples and pendimethalin analytical standard will be supplied.

**Time schedule.** The collaborative trial is intended to be carried out during March - April 2006 (shipment in mid February 2006).

Those who wish to participate should contact the organizer by 13<sup>th</sup> February.
