28 December 2006

407. prochloraz

This is to inform you that Makhteshim Chemical Works is planning to organize a collaborative trial on a method for prochloraz.

Principle. The prochloraz content is determined by reversed-phase HPLC using a 250 x 4.0 mm C18 column, (5 µm particle size) (e.g. Supelcosil LC18DB, LiChrospher 100 RP-18 or equivalent) with mobile phase composed of acetonitrile and 0.1 M ammonium acetate 55:45 and UV detection at 240 nm. Quantification is done by external standardization.

Scope. It is intended to analyze five samples consisting of two technical materials, two Prochloraz Zinc complex samples and one emulsifiable concentrate. Prochloraz analytical standard will be supplied.

Time schedule. The collaborative trial is intended to be carried out during January - February, 2007.

Those who wish to participate should contact the organizer by 15th January, 2007.
