CIPAC INFORMATION SHEET No 269

Your Ref:
Our Ref: LB
16 January 2007

571. azoxystrobin

This is to inform you that Syngenta is planning to organize a collaborative trial on a method for azoxystrobin.

Principle. Azoxystrobin is determined by capillary gas chromatography using a 25 m x 0.32 mm (i.d.) CPSil 13CB column, with 0.25µm film thickness, helium carrier gas, split injection and flame ionisation detection. Quantification is done by internal standardization.

Scope. It is intended to analyze five samples consisting of two technical materials, one WG and two SC formulations. Samples, azoxystrobin analytical standard and the internal standard will be supplied. On request columns will also be supplied. (up to 15)

Time schedule. The collaborative trial is intended to be carried out during April– May 2007. Those who wish to participate should contact the organizer by 16th March 2007.

Contacts:

Mr Huw Crowther
