739. dimoxystrobin

This is to inform you that DAPA/BASF is planning to organize a collaborative trial on a method for dimoxystrobin.

Principle. The content of dimoxystrobin is determined by capillary gas chromatography (column coated with crosslinked 100% dimethyl polysiloxane, e.g. DB-1, 30 m x 0.32 mm (i.d.), 0.25µm film thickness) using split injection, flame ionisation detection and tetraphenylethylene as internal standard.

Scope. It is intended to analyze five samples consisting of two technicals, two SC formulations and one SE formulation. Samples, internal standard and dimoxystrobin analytical standard will be supplied.

Time schedule. The collaborative trial is intended to be carried out during November 2009 – February 2010.

Those who wish to participate should contact the organizer by 31st October 2009.

Contact:

Dr. Jürgen Fries
BASF SE
Agricultural Center Limburgerhof
