#### 987 flupyradifurone

Dear Colleague,

This is to inform you that Bayer CropScience AG is planning to organise a full scale collaborative trial on a method for flupyradifurone.

**Principle:** The content of flupyradifurone in formulations is determined by reversed phase high performance liquid chromatography on a 50 x 4.6 mm (i.d.), 2.6 µm C18 column (Phenomenex Kinetex C18, or equivalent), using gradient elution (plus flush gradient after elution of the active substance) with mobile phase composed of acetonitrile/water (acidified) and UV detection at 280 nm. Quantitation is done by external standardisation.

**Scope:** It is intended to analyse seven samples consisting of one technical material and six formulation samples (AL, EC, EW, FS, SL and WG). Samples and flupyradifurone analytical standard will be supplied.

**Time schedule:** The collaborative trial is intended to be carried out during December 2016- March 2017 (shipment in December 2016). Those who wish to participate should contact the organiser by 31 October 2016. The results should be reported by the end of March 2017.

**Further information:** The trial is limited to maximum 20 participating laboratories because of the availability of samples (selection based on first arrived, first served).
