737 spiroadiclofen

This is to inform you that Shandong Kangqiao Bio-technology Company Limited is planning to organize a full scale collaborative trial on a method for spiroadiclofen.

Principle: The content of spiroadiclofen in formulations is determined by reversed phase HPLC on a 250 x 4.6 mm (i.d.), 5µm C18 column, with mobile phase composed of methanol/water (90/10 v/v) and UV detection at 260 nm. Quantitation is done by external standardization.

Scope: It is intended to analyze five samples consisting of two lots of technical material (TC), and three lots of suspension concentrate (SC). Samples and spiroadiclofen analytical standard will be supplied.

Time schedule: The collaborative trial is intended to be carried out during September 2018-December 2018 (shipment in the first week of October 2018). Those who wish to participate should contact the organizer by 25th September 2018. The results should be reported by 15th December 2018.

Note: The trial is limited to maximum 18 participating laboratories because of the availability of samples. The selection is based on the application order.
