997 etpyrafen

This is to inform you that Shenyang Research Institute of Chemical Industry is planning to organize a full scale collaborative trial on a method for etpyrafen.

Principle: The content of etpyrafen in formulations is determined by reversed phase HPLC on a 150 x 4.6 mm (i.d.), 5µm C18 column (ZORBAX SB C18, or equivalent with the same selectivity), with mobile phase composed of acetonitrile/water (0.05% phosphoric acid solution) (80/20 v/v) and UV detection at 230 nm. Quantitation is done by external standardization.

Scope: It is intended to analyze five samples consisting of two lots of technical material (TC), and three lots of suspension concentrate (SC). Samples and etpyrafen analytical standard will be supplied.

Time schedule: The collaborative trial is intended to be carried out during October 2018- January 2019 (shipment in the third week of October 2018). Those who wish to participate should contact the organizer by 10th October 2018. The results should be reported by 31th January 2019.

Note: The trial is limited to maximum 20 participating laboratories because of the availability of samples. The selection is based on the application order.
