CIPAC INFORMATION SHEET No 318

Your Ref: Our Ref: LB 3 December 2018

## 91 atrazine

This is to inform you that Syngenta is planning to organize a full scale collaborative trial on a method for atrazine.

**Principle**: The content of atrazine in formulations is determined by gas chromatography on a DB-225 or equivalent fused silica column, 15 m length, 0.25 mm i.d., 0.25 µm film thickness, using hydrogen as carrier gas and flame ionization detection. Quantitation is done by internal standard calibration.

**Scope**: It is intended to analyze five samples consisting of two technical materials (TC), one water dispersible granule (WG) and two suspension concentrates (SC). Samples, analytical standard and internal standard will be provided.

**Time schedule**: The collaborative trial is intended to be carried out between January 2019 – mid of April 2019. Those who wish to participate should contact the organiser by 2<sup>nd</sup> January 2019. The results should be reported by the mid of April 2019.

**Note**: The trial is limited to maximum 15 participating laboratories because of the availability of samples. The selection is based on the application order.

## **Contact:**

Dr. William Meyerhoffer Syngenta Crop Protection, LLC 410 Swing Road Greensboro NC 27409, USA
