

CIPAC review of Handbooks G, H, J and K

As for previous handbooks, CIPAC has conducted a method review to identify possible methods that need to be updated (e.g. packed column used instead of capillary column or the use of hazardous reagents that can be substituted by less harmful reagents).

The review should also identify methods that from the points of view of CIPAC must be regarded as methods “no longer supported”. As already stipulated, this does not mean that these methods cannot be used. They might be fit for purpose, but they can no longer be regarded as valid CIPAC methods.

You have the possibility to comment on the outcome of the review of Handbooks G, H, J and K. Please send your comments to cipac@agroscope.admin.ch or CIPAC2019@bvl.bund.de. The deadline for commenting is the **31st March 2019**. The results will be presented at the next CIPAC meeting.

CIPAC would like to thank the ESPAC and the DAPA for their work on this review.

CIPAC, December 2018
